

MOULD TESTING

A close-up photograph of a wall surface showing significant mould growth. The mould is dark brown and black, with some lighter, greyish patches. It is growing in a vertical crevice or along a crack in the wall. The surrounding wall surface is a light, off-white color.

Detection that
drives decisions

What do you need?

LOCAL

Committed to Aotearoa New Zealand

TRUSTED

Since 1984

Mould grows in damp indoor areas, damaging buildings and triggering health issues like allergies and asthma. It spreads through airborne spores and can thrive on any moist surface.

We offer mould testing using the internationally recognised methods of Tape Lift and Spore Trap to identify common mould types such as *Aspergillus*, *Penicillium*, *Cladosporium* and *Alternaria*.

OUR TESTING HELPS YOU TO:

- Assess health risks in homes and businesses
- Uncover hidden moisture problems
- Identify the types mould present for targeted treatment

WHY CHOOSE HILL LABS?

- Fast Turnaround, Seamless Process
- NZ Owned and Operated
- Personalised Customer Support
- Trusted by Industry Professionals
