SAMPLING INSTRUCTIONS

Interpretation of test data depends on the sample being taken (sampled) in the recommended manner. These notes will help to ensure that this is done. More detailed guides for specific crops are available on our website under **Crop Guides**.
Please advise laboratory if hazardous substances possibly present in/on samples

Feed:

1. Collect forage or silage sample representative of the feed source.
 2. Take approximately **500g-1kg** and place in Feed sample bag, seal and identify clearly with permanent marker pen.
 3. Carefully check that you have filled in the request form, then promptly despatch to the laboratory. Send samples to laboratory as soon as possible after collection, or keep chilled overnight if necessary.
- Feed quality tests will be analysed using NIRS technology with automatic test notation if statistical prediction outliers exist. Reference method (wet chemistry) tests are available upon request.

TEST SELECTIONS

See Crop Guides on website
www.hill-labs.co.nz

Note: Soil and Plant testing will incur a sample preparation fee if the basic test is not requested.
